DETAILED ACTION

This Office Action is responsive to the Amendment filed on April 12, 2007. The Applicant has amended claims 1, 6, 10, 14. However, Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, this action is made final.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Horie, JP 2003-142157 (machine translation).

Horie teaches a nonaqueous electrolyte comprising a cyclic carbonate (0022), a lithium salt (0020), and a polyether-modified silicon oil as described in claim 1 (0015-0018, Formula 9). It teaches a chain carbonate (0022). It teaches a rechargeable lithium battery comprising a positive and negative electrode (0036-0037), and polyether-modified silicon oil as described in claim 6 (Formula 9). It teaches the negative electrode comprises polyvinylidene fluoride (0025). It teaches a chain carbonate (0022). It teaches the polyether-modified silicon oil includes end silicons, wherein each end Si atom includes a terminal bond to a polyether group (Formula 9).

Art Unit: 1745

Thus, the invention as a whole would have been obvious to one of ordinary skill in the art at the time the invention was made because although it does not recite the viscosity and flash point of the silicon oil, these properties would be characteristic features of the silicon oil since the formulas are equivalent. Additionally, the negative electrode comprises polyvinylidene fluoride, which is a functional equivalent of polyacrylate. In addition, although it does not recite a fluorinated cyclic carbonate, it does list cyclic carbonates.

Response to Arguments

3. Applicant's arguments with respect to above claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
